

# ERSO Intranet

## *...The Gears That Connect Us*

The ERSO Intranet supports approximately 4,000 faculty, staff and student users. The Intranet integrates data from multiple campus enterprise systems into a single point of entry. The Intranet is not a shadow system, but rather it serves as a nexus for individuals to easily access data and initiate various administrative service requests. The ERSO Intranet **integrates all business functions** into a tight and seamless workflow across three distinct functions:

### People – HR Database

- PIs have a current list of all employees paid on their projects and a list of the students they are advising (non-paid)

### Finance – Reporting

- Speedtypes are pulled in nightly from BFS – nicknames are given to all chartstrings for easier identification
- Faculty can access summary reports on the status of their projects including a link to PI Portfolio for further detail

### Services – Request Intake

- GSR Appointments – requests initiated by students with workflow to faculty and ERSO HR
- Business Service requests (travel, purchasing, entertainment)
- Earnings Distributions – request employee funding changes, changes, data pulled from HCM
